

ST. JOHN'S COLLEGE ANCHAL
FYUGP POLITICAL SCIENCE
ARTIFICIAL INTELLIGENCE (AI) INTEGRATED
ASSIGNMENT SYSTEM

Eight Steps

Step 1: Students need to identify a concept or theme from any of the five modules on which they wish to write an assignment. It should be something relatable to them based on their personal experiences, such as a real-life incident or a childhood memory.

Step 2: Students **must obtain prior approval from the course instructor** regarding the academic rationale for linking the concept or theme from the FYUGP Political Science syllabus to an event in their life.

Step 3: Students should develop a 500-word write-up in Malayalam, narrating a politically significant aspect of their life, using conceptual insights gained from the reading material, lectures, and classroom discussions.

Step 4: Students have to translate the Malayalam text into English.

Step 5: Students can use an AI tool to improve the language of their write-ups by utilizing prompts such as "grammar check" or "refine the language."

There will be an interim evaluation at this stage to ensure that the student is proceeding in the right direction.

Step 6: Students are free to enhance the academic standard of their draft in English using an AI tool, but they must clearly mention the prompts used in this process within the assignment.

Step 7: For the purpose of evaluating the assignment, each student is also required to reflect in Malayalam on the following questions (roughly 150 words):

- a. What was the major difficulty in translating your Malayalam draft, and do you feel that AI language correction helped create a better version?
- b. What differences do you notice between the English draft you developed in Step 5 and the improved one in Step 6 using AI tools?
- c. Do you think the Artificial Intelligence (AI) integrated assignment system helped you reconstruct your ‘lived experience’ using concepts in Political Science?

Step 8: Students selected at random will be asked to share their reflections in class.

A note on the rationale behind the assignment system

The AI-integrated assignment system developed for Bachelor's degree students features built-in mechanisms to ensure the originality of submissions. This system is designed solely for training purposes to support Malayali students in their intellectual journeys, particularly when they face challenges due to low proficiency in academic English. Students should be aware that this system does not replace the necessity of reading original texts and engaging with the works of established scholars in the field. Students are strongly encouraged to explore foundational literature and to develop a comprehensive understanding of their discipline through critical analysis and engagement with primary sources.
